

## **Senior .NET Developer**

The ideal candidate must have strong programming skills and the desire to work on a variety of projects using the latest technologies and will be to help plan, design, develop, test, debug, and deploy highly-available applications using the .NET Framework 2.0/3.0 and SQL Server technologies. An ideal candidate will be an extremely proficient .NET developer, and will be comfortable handling new challenges involving emerging technologies.

### **Job Responsibilities:**

- Help Application Architect in designing, developing and implementing internal development framework for product development
- Help Application Architect for planning, designing, developing and software product architecture and advanced research for new .net technologies
- Provide a senior-level contribution to a team responsible for the design, development and implementation of critical business applications using the .NET Framework 2.0/3.0 and SQL Server technologies
- Work with traditional software lifecycle methodologies. Create design documents when and as required. Perform coding, debugging and testing.
- Define the integration between proposed development projects and existing systems, software and hardware
- Consider and research emerging technologies to improve current applications, architectures and processes
- Work in a collaborative development environment, providing assistance & technical guidance to less experienced team members

### **Requirements:**

- BS(4 years) (CIS, EE, CS) + or equivalent working experience
- Expert-level expertise with ASP.NET, Web Services, and Windows Forms
- Experience with large-scale applications in a leadership role
- Expert-level competency in C#.NET
- Broad experience with .NET Framework (1.1/2.0/3.5)
- Experience with ADO.NET, SQL Reporting Services and SQL 2000/2005
- Third-party controls (Infragistics or similar)
- Hands-on project experience with .NET 3.0 (WF, WCF, WPF, WCS), Spring.net, Nhibernate
- Demonstrable experience developing solution architecture
- Leadership experience throughout the software lifecycle
- Familiar with VSTS
- Expert-level experience with one or more emerging technologies such as AJAX.NET
- Experience creating custom controls for either ASP.NET or Windows Forms
- MOSS project experience desired
- Must be a self-starter who requires minimal supervision.
- Ability to handle diverse situations, multiple projects and rapidly changing priorities.
- Ability to come up with the best solution for given requirements.
- Ability to provide reasonably accurate estimates for projects, based on client-provided technical and functional requirements.
